

## Laying the foundations for BIM World Paris 2019

An important event in the Building Information Modelling (BIM) calendar is fast approaching. Policymakers, business leaders, technological innovators, and builders of infrastructure will come together at BIM World Paris from 2 to 4 April 2019 to discuss the critical issues involved in the digital transformation of the construction sector.

### Presenting the future of BIM in Europe

The EU BIM Task Group will attend too and introduce their vision of how BIM can fuel both innovation and growth in European markets. **Souheil Soubra**, Chair of the Group's Steering Committee, and **Milena Feustel**, Co-Chair, will be leading a session on **Tuesday 2 April (17:00-18:30)**, in which they will present the Task Group's BIM roadmap. This roadmap charts the transition to the digitalisation of the construction industry, which could unlock a 15-25% saving for the global infrastructure market by 2025.

### Achieving the best value for public money

The session run by the EU BIM Task Group aims to highlight the vast potential for public procurers to make savings thanks to the implementation of BIM. Alongside the reduction in construction and operation costs, savings could also be generated by social and environmental benefits. The Task Group therefore aims to facilitate the uptake of BIM in delivering the very best value for public money, in turn creating a more streamlined, competitive and sustainable construction sector.

Join Souheil Soubra, Milena Feustel and other members of the Steering Committee at BIM World Paris to learn more about the future activities and goals of the EU BIM Task Group.
